

1.write a program check following conditions

> If number is less than 10 print "one digit" on screen

> If number Greater than or equal to 10 but less than 100 print "two digit" on screen

> Otherwise print integer on screen

```
#include <stdio.h>
```

```
int main() {  
    int num;  
    printf("Enter a number: ");  
    scanf("%d", &num);  
  
    if (num < 10)  
        printf("One digit\n");  
    else if (num >= 10 && num < 100)  
        printf("Two digit\n");  
    else  
        printf("Integer\n");  
  
    return 0;  
}
```

Output:

Enter a number :7

One digit

Enter any number; 56

Two digits

Enter any number: 123

Integer

Enter any number: -7

One digit

2.write a program to read any day number in integer and display name in word format

```
#include <stdio.h>
```

```
int main() {  
    int day;  
    printf("Enter day number (1-7): ");  
    scanf("%d", &day);  
  
    switch(day) {  
        case 1: printf("Sunday\n"); break;  
        case 2: printf("Monday\n"); break;  
        case 3: printf("Tuesday\n"); break;
```

```

        case 4: printf("Wednesday\n"); break;
        case 5: printf("Thursday\n"); break;
        case 6: printf("Friday\n"); break;
        case 7: printf("Saturday\n"); break;
        default: printf("Invalid day number\n");
    }

    return 0;
}

```

Output :

```

Enter any integer:456
Four five six
Enter any integer: -39
Minus three nine

```

3. Write a program to find given year is a leap year or not

```
#include <stdio.h>
```

```

int main() {
    int year;
    printf("Enter a year: ");
    scanf("%d", &year);

    if ((year % 4 == 0 && year % 100 != 0) || (year % 400 == 0))
        printf("%d is a leap year\n", year);
    else
        printf("%d is not a leap year\n", year);

    return 0;
}

```

Output:

```

Enter a year: 2024
2024 is a leap year.
2023 is not a leap year.
Enter a year: 2000
2000 is a leap year.

```

4.write a program to check whether a character is an alphabet digite or special character

```
#include <stdio.h>

int main() {
    char ch;
    printf("Enter a character: ");
    scanf("%c", &ch);

    if ((ch >= 'a' && ch <= 'z') || (ch >= 'A' && ch <= 'Z'))
        printf("Alphabet\n");
    else if (ch >= '0' && ch <= '9')
        printf("Digit\n");
    else
        printf("Special character\n");

    return 0;
}
```

Output : enter any character:A

It is an alphabet.

It is a digit.

Enter any character:@

It is a special character.

5.write a program to check whether and alphabet is a vowel or consonent

```
#include <stdio.h>

int main() {
    int day;
    printf("Enter day number (1-7): ");
    scanf("%d", &day);

    switch(day) {
        case 1: printf("Sunday\n"); break;
        case 2: printf("Monday\n"); break;
        case 3: printf("Tuesday\n"); break;
        case 4: printf("Wednesday\n"); break;
```

```
        case 5: printf("Thursday\n"); break;
        case 6: printf("Friday\n"); break;
        case 7: printf("Saturday\n"); break;
        default: printf("Invalid day number\n");
    }

    return 0;
}
```

Output : enter an alphabet:A

A is vowel.

Enter an alphabet: b

b is a consonent

Enter an alphabet: 5
